Dr. Liuxin Yan

Assistant Professor

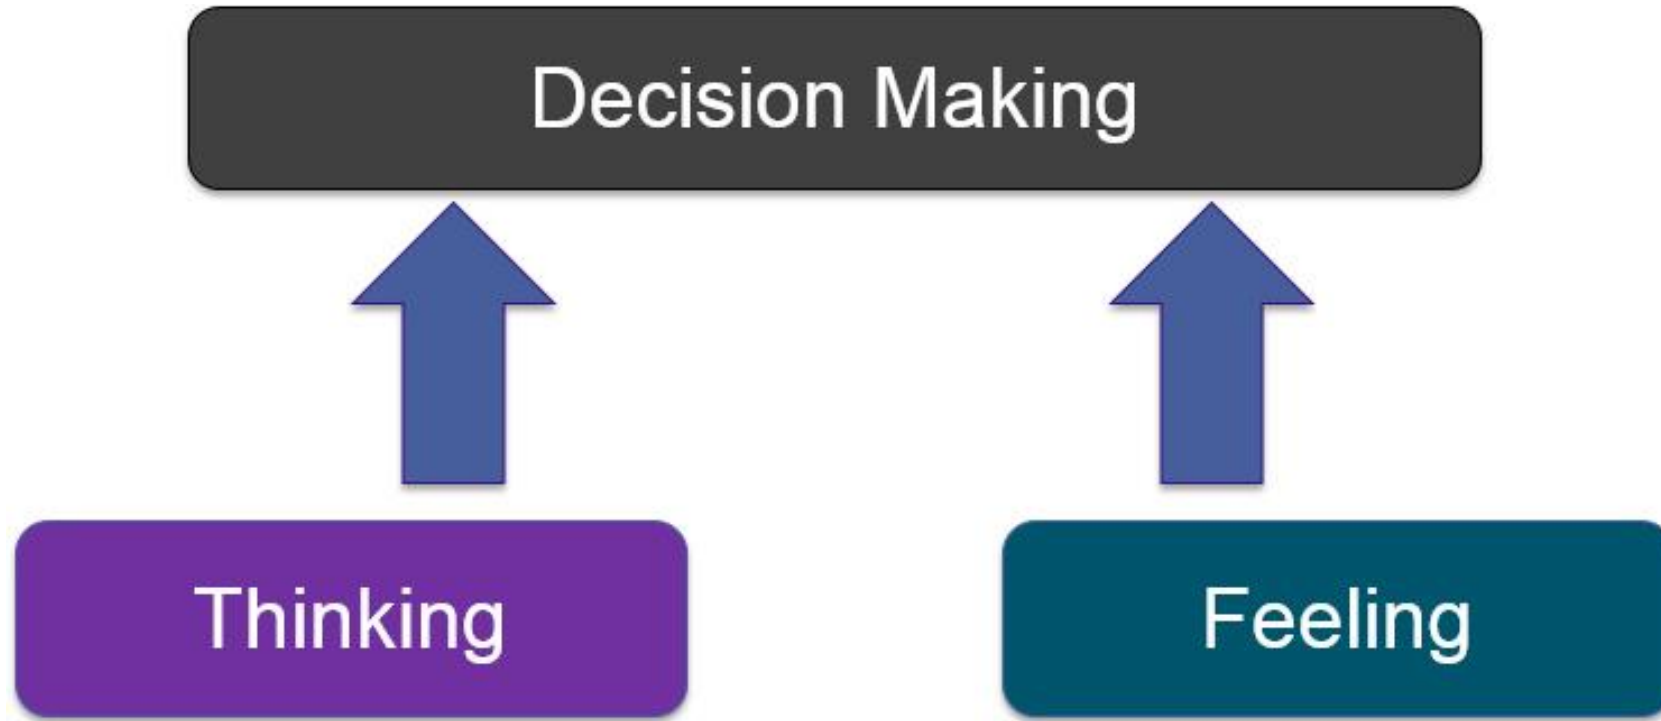

Leadership and Organization Management

School of Economics and Management

PANAS Model

Thinking vs Feeling

- **Do emotions make us (un)ethical?**
 - Research on moral emotions questions the previous belief that emotional decision making is based on higher-level cognitive processes

Sources of Emotions and Moods

- **Personality**
 - Moods and emotions have a trait component.
 - **Affect intensity:** how strongly people experience their emotions.
- **Time of day**
 - There is a common pattern for all of us.
 - Happier in the midpoint of the daily awake period.
- **Day of the week**
 - Happier toward the end of the week.

Sources of Emotions and Moods

- **Weather**
 - Illusory correlation – no effect.
- **Stress**
 - Even low levels of constant stress can worsen moods.
- **Social Activities**
 - Physical, informal, and dining activities increase positive moods

Sources of Emotions and Moods

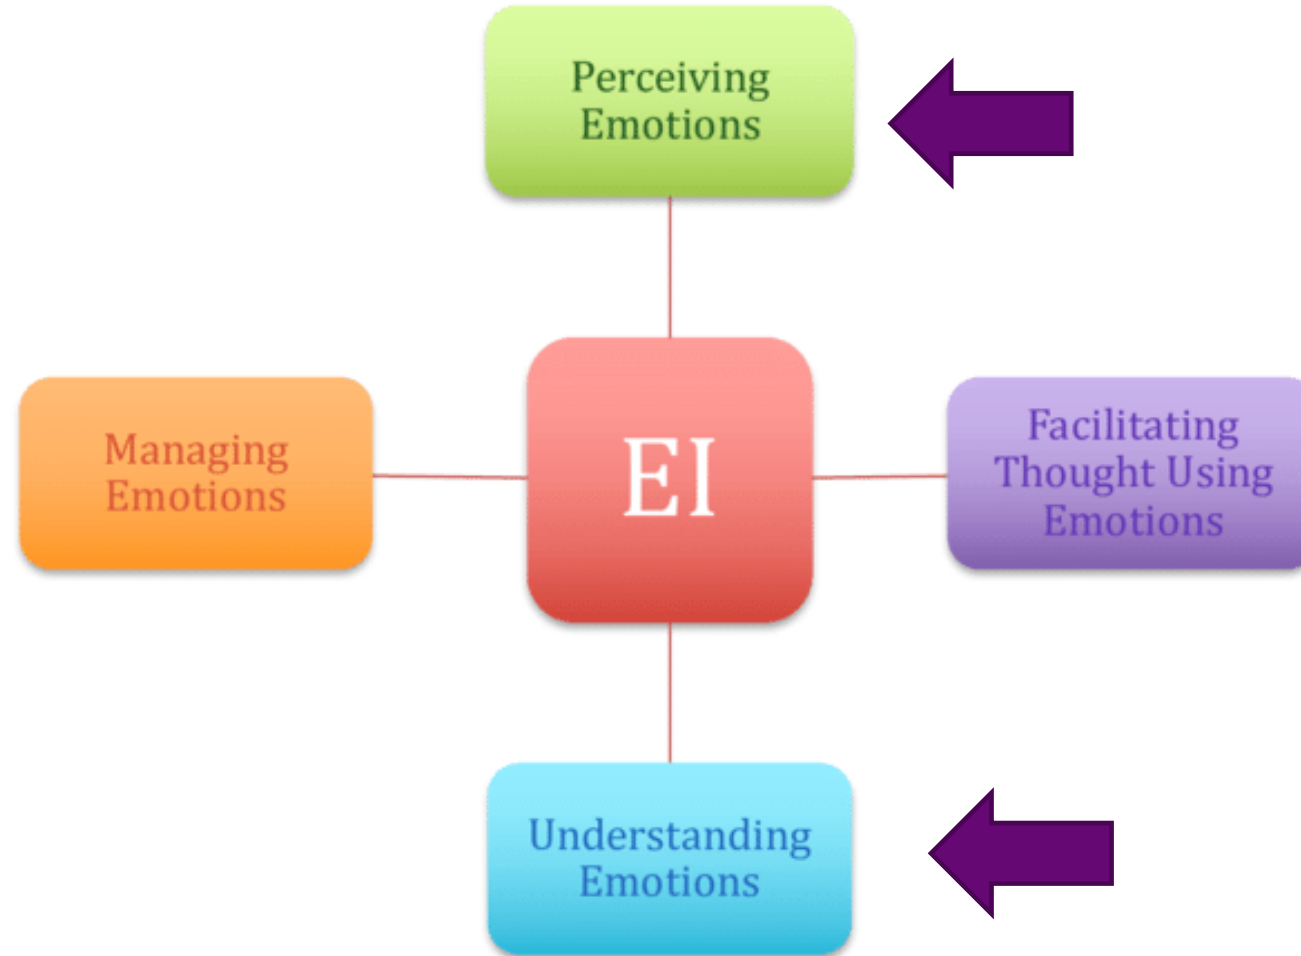

- **Sleep**
 - Poor sleep quality increases negative affect.
- **Exercise**
 - Does somewhat improve mood, especially for depressed people
- **Age**
 - Older people tend to focus on more positive stimuli than younger adults.

Emotional Intelligence

- A person's ability to:
 - Perceive emotions in the self and others.
 - Understand the meaning of these emotions.
 - Regulate one's emotions accordingly.

Emotional Intelligence

Emotion Regulation

- **Emotion regulation** involves identifying and modifying the emotions you feel.
- Not everyone is equally good at regulating emotions.
 - Leaders need to be good at it!

Emotion Regulation Strategies

- Techniques
 - Surface acting
 - Deep acting
 - Emotional suppression
 - Cognitive reappraisal
 - Mindfulness

Why Leaders Care?

- Leaders' emotions influence employee motivation, workplace climate, and overall organizational success.
- Emotions are not just personal experiences; they **signal messages** to subordinates about the workplace environment and expectations.

Why Leaders Care?

- Employees often “**catch**” their leaders’ emotions
- Leaders’ emotions shape team morale

Why Leaders Care?

- Leaders who express anger and frustration in performance feedback are perceived as less effective.
- Leaders who switch between positive and negative emotions exhaust subordinates
 - But it may also inspire creativity and inspiration
- Leaders must **control their emotional expressions** to maintain authority and credibility

Managing Stress at Work

■ Organizational Approaches

- Several organizational factors that cause stress are controlled by management.
- Task and role demands can be modified or changed.
- Strategies include:
 - Better selection and placement, and training.
 - Goal-setting.
 - Redesigning jobs.
 - Employee involvement.
 - Organizational communication.
 - Employee sabbaticals.
 - Wellness programs.

Managing Stress at Work

- **Selection and Placement**
 - Individuals with little experience or an external locus of control tend to be more prone to stress.
 - Selection and placement decisions should take these facts into consideration.
 - Training can increase an individual's self-efficacy and thus lessen job strain in these situations.

Managing Stress at Work

■ Goal-setting

- Goals can reduce stress as well as provide motivation.
- Employees who are highly committed to their goals and see purpose in their jobs experience less stress.

■ Redesigning Jobs

- Redesigning jobs to give employees more responsibility, more meaningful work, more autonomy, and increased feedback can reduce stress because these factors give employees greater control over work activities and lessen dependence on others.

■ Employee involvement

- Role stress is detrimental to a large extent because employees feel uncertain about goals, expectations, how they'll be evaluated, and the like.
- Giving employees a voice in management decisions can increase employee control and reduce role stress.
- Managers should consider increasing employee involvement in decision making.

Managing Stress at Work

■ Organizational Communication

- Increasing formal organizational communication with employees reduces uncertainty by lessening role ambiguity and role conflict.
- Given the importance that perceptions play in moderating the stress-response relationship, management can also use effective communications as a means to shape employee perceptions.

■ Corporate wellness programs

- Typically provide workshops to help people quit smoking, control alcohol use, lose weight, eat better, and develop a regular exercise program.
- Focus on the employee's total physical and mental condition.
